

User Notes for PD300-3W-V1 Photodiode Sensors Ophir P/N 7Z02426 (and 7Z02426B)

The PD300-3W sensor has an exclusive filter that stands up to 3W CW power and over 150W/cm² power density.

However, the filter is in a plastic housing and prolonged exposure at maximum power can cause the external filter plastic to heat up and soften.

Therefore, it is recommended not to measure for more than approximately 3 minutes at a time at maximum 3W power.
