Note: (a) Calibration curve is verified and adjusted at specified wavelengths.	Specified wavelengths: 355nm, 532nm, 1064nm and 2100nm.					Specified wavelengths: 355nm, 532nm, 1064nm and 2100nm.				
At other wavelengths, there may be an additional error up to the value given.	Max additional error at other wavelengths not specified above: ±2%. <250nm not calibrated.					Max additional error at other wavelengths not specified above: ±2%. <250nm not calibrated.				
Note: (b)	For wavelengths >2.1µm, derate to 40% of above values. For beam size ≤5mm. For 10mm beam, derate to 40% of above value.					For wavelengths below 600nm, derate to 60% of given values. For beam size ≤4mm. For 8mm beam, derate to 50% of above values.				

Note: (c) With the "user threshold" setting set to minimum. For other settings, the spec is for >10% of full scale or greater than twice the "user threshold", whichever is greater. The user threshold is not available with LaserStar, Nova, Pulsar, USBI and Quasar. For these meters, the threshold is set to minimum and the linearity spec is >10% of full scale. The PE-C series will only operate with Nova meter with an additional adapter Ophir P/N 7Z08272 (see page 148). The adapter can introduce up to 1% additional measurement error. The user threshold feature allows adjustment of the internal threshold up to 25% of full scale if desired to avoid false triggering in noisy environments. For further information, see the FAQs on our Website.

Note: (d) With the LaserStar, Pulsar, USBI, Quasar and Nova with adapter, only 2 out of 5 pulse widths settings are available; for the PE50-DIF-C model the 2µs (displayed as "30µs") and 1ms settings, and for the PE25BF-DIF-C model the 1ms and 10ms settings.
