Note: (a) Calibration accuracy at various wavelengths as specified here. At other wavelengths, there may be an additional error up to the value given. Specified wavelengths: 355nm, 532nm, 1064nm, 2100nm and 2940nm. Max additional error at other wavelengths not specified above: ±2%. <250nm not calibrated.

Note: (b) For wavelengths >2.1µm, derate to 10% of above values. For wavelengths below 600nm, derate to 60% of given values. For wavelengths below 240nm, derate to 1J/cm². For beam size ≤16mm. For 32mm beam, derate to 50% of above values.

Note: (c) With the "user threshold" setting set to minimum. For other settings, the spec is for >10% of full scale or greater than twice the "user threshold", whichever is greater. The user threshold is not available with LaserStar, Nova, Pulsar, USBI and Quasar. For these meters, the threshold is set to minimum and the linearity spec is >10% of full scale. The PE-C series will only operate with Nova meter with an additional adapter Ophir P/N 7Z08272 (see page 141). The adapter can introduce up to 1% additional measurement error. The user threshold feature allows adjustment of the internal threshold up to 25% of full scale if desired to avoid false triggering in noisy environments. For further information, see the FAQs on our Website.

Note: (d) With the LaserStar, Pulsar, USBI, Quasar and Nova with adapter only 2 of the pulse width settings are available, the 1ms and 10ms settings.

Note: (e) For maximum power. For lower powers the damage threshold is correspondingly higher.

Note: (f) For powers below 50W it is recommended to work with the fan off. If working with the fan on, the threshold must be set to 6% and the lowest measurable energies will be as follows:

Max Pulse Width Setting	1ms	2ms	5ms	10ms	20ms
Lowest Measurable Energy mJ	4mJ	4mJ	4mJ	4mJ	4mJ
